Field Logistic Support System

Italian Red Cross field hospital used in various missions (Sri Lanka, Pakistan)

Design of turn-key logistic solutions custom-made according to the operative context:

✍ Field hospital

Structures for a fast intervention in the first emergency phase, that allow to manage autonomously the hospitalization of an important number of persons implementing the primary sanitary needs, like first aid, surgical, radiology, maternity, person shelter and so on.

✍ Logistic bases of family shelter

This kind of solution foresees “turn-key” the fitting-out of a logistic situation allowing to lodge the persons and guaranteeing comfort and socialization in a primary needs situation (dormitory zone, socialization zone, canteen, laundry, showers and bathroom, infirmary and decontamination).

✍ Base field

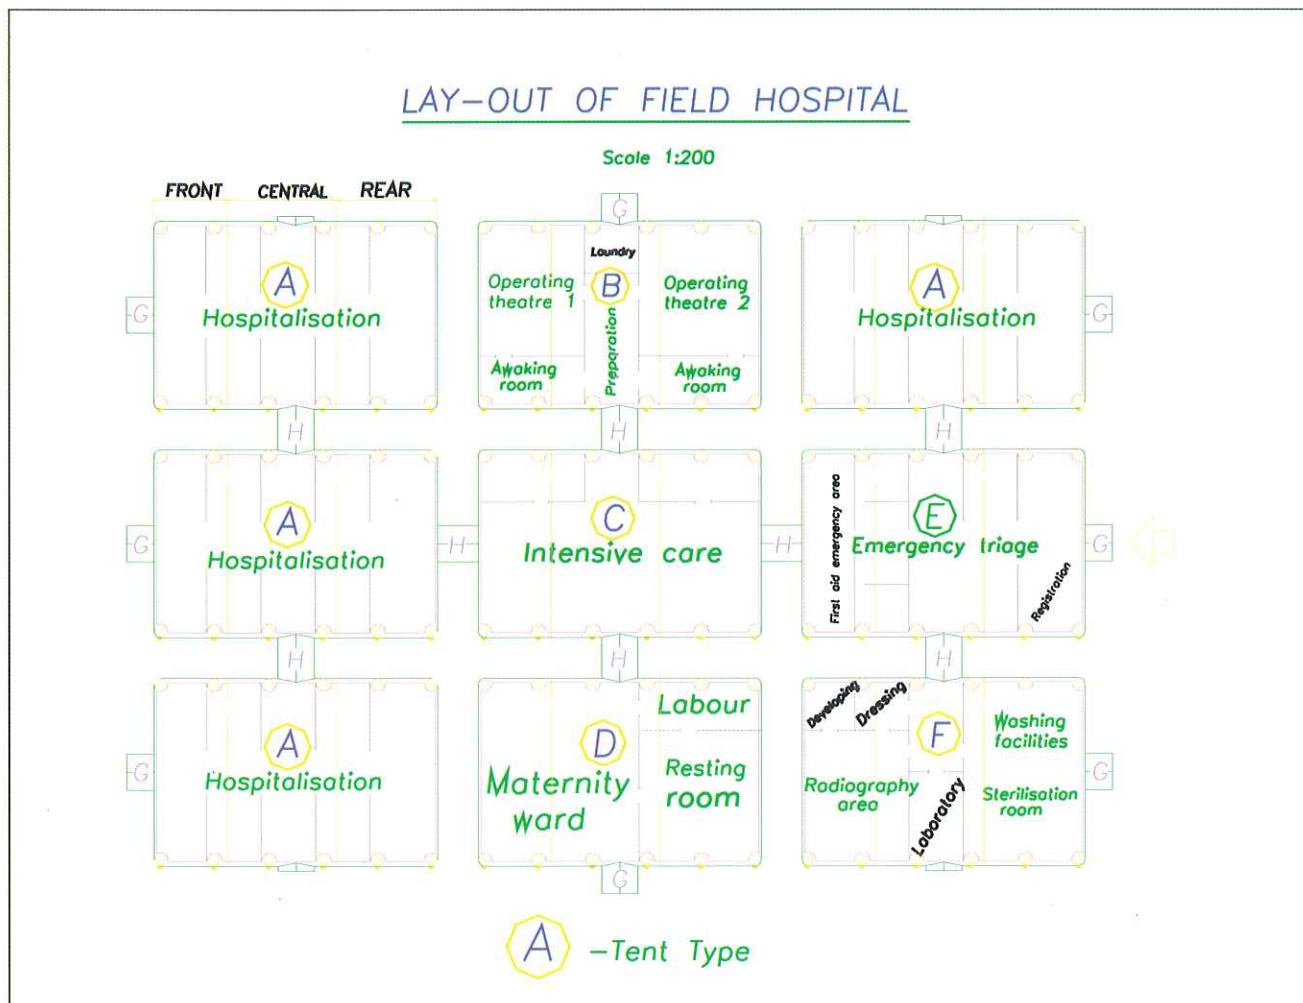

Such solutions meet the different needs that the operative staff requires (operating room, dormitories, canteen, services).

✍ Advance medical post

It allows to manage the sanitary demands in temporary situations (big events, concerts, incidents, sports events, exhibitions and so on).

Field hospital "Médécins Sans Frontières" used in Pakistan.

Pakistan 2005 MSF Field Hospital

The structure, in such configuration, allows the lodge 100 people besides to foresee two operating theatres, a maternity room, a radiology room, an intensive care, a pharmacy and the first-aid area
