

# coastaldry

**coastaldry** is a new rescue means designed by Eurovinil for boats sailing within 12 miles from the coast.

It is approved in compliance with the Ministerial Decree N. 412 dated 29/09/1999, but exceeds its requirements as it prevents shipwrecked persons from remaining in the water while waiting for salvage, thus avoiding the risk of hypothermia.

**coastaldry** is a rectangular-shaped self-inflating rescue means that consists of two independent buoyancy tubes placed one on top of the other and of a bottom welded to the lower buoyancy, which allows the shipwrecked persons to remain dry. The inflation is ensured by two cylinders (one for each buoyancy) containing CO2 and nitrogen, activated by pulling the handle outside the valise.

It operates in a range of temperature between -18°C and +65°C.

**coastaldry** is also equipped with retro-reflective tapes on the buoyancies to make the rescue easier and with four ballast bags to ensure stability. Paddles, rescue quoit, floating knife and a signalling whistle are part of the equipment.

Thanks to its under-vacuum packing it can be serviced every four years.

## TECHNICAL FEATURES

Material of the hull	E.M.C (EV Marine Compound)
Valise	1100 Decitex fabric
Inflation system	VTE 99 multidirectional firing mechanism
Approval	Italian Ministry of Infrastructures and Transports for the navigation within 12 miles from the coast

coastaldry		Valise	
Capacity	16 (up to 8 <b>dry</b> )	Dimensions (cm)	Weight (Kg)
		60 x 30 x 18	20

Size tolerance +/- 2cm

## EQUIPMENT

- Bellows
- Paddles
- Rescue quoit
- Signalling whistle
- Floating knife
- Survival instructions manual
