

# STANDARD

These rafts consist of two independent inflatable buoyancy tubes placed one on top of the other, they are provided with a single floor and of an inflatable arch tube supporting the canopy.

Thanks to their essential structure, they stand out because of their lightness and reduced bulk and for these reasons they are much appreciated and required by the pleasure boaters.

The rafts of the Standard range, available with different types of equipment, are approved by the Greek Ministry of the Merchant Navy for the leisure navigation and may be taken aboard of boats flying the Greek flag or the flag of those countries where there is no special national leisure regulation in force.

The service of the Italian and UK type of rafts is required every 3 years, except for the Italian pack rafts on board Italian flagged vessels, for which it is every 2 years. The service of the Greek and Argentinian type is required every year.

## TECHNICAL FEATURES

Material of inflatable part	E.M.C (EV Marine Compound)
Container	ABS
Valise	1100 Decitex fabric
Inflation system	VTE 99 multidirectional firing mechanism
Approval	Greek Ministry of the Merchant Navy for the leisure navigation

12 YEARS ON FABRIC AND WELDINGS GUARANTEED
